

Note: If use this product free hand instead of having the rod tip supported by table, to prevent rubber cap from being cut away by knife, remove the cap from the rod tip

SHARPENING INSTRUCTION

1. Position the sharpening rod vertically, point down on a cutting board, table, or other suitable surface (See Fig. 1). Apply sufficient downward pressure on the sharpening rod to avoid slip during the sharpening process.
2. The built-in fixed angle guide contains six slope faces all of which are 20 degrees that are suitable for most knives. Place the heel of your knife blade against the angle guide if you want a sharpening angle other than 20 degrees. Adjust the angle between the knife blade and the sharpening rod as desired. With consistent downward pressure, push the knife downward along the rod while pulling the knife toward you from heel to tip. (See Fig. 3)
3. Repeat this action on the opposite side of the knife blade. (See Fig. 4)
4. Repeat Steps 2 & 3 until the knife is sharp. Always take alternating passes with your knife across the sharpening rod, applying appropriate pressure.

Note: Always sharpen the full length of the knife blade and give each side of the blade the same number of strokes to maintain an even cutting edge. The speed of the process has no impact on the result.

MAINTENANCE

Wipe it with a dry cloth after each use. For a deeper cleaning, use a wet cloth to remove any debris.
